# Frost Fighter<sup>®</sup> ThermaSync<sup>®</sup> Switch Boss

2730

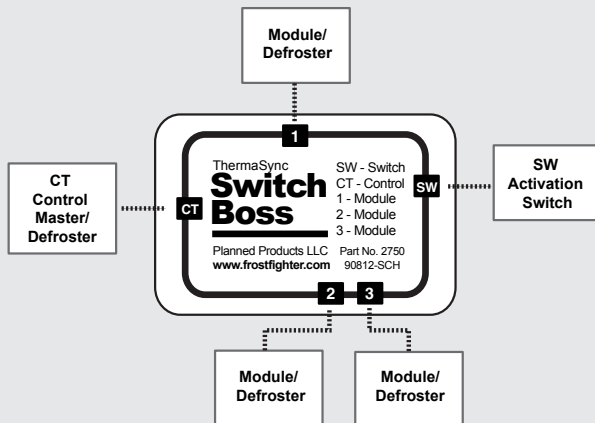

12 / 24 Volt Defroster Controls

## Single switch, many defrosters

The ThermaSync Switch Boss enables a single switch to activate almost any number of Clear View II Defrosters using ThermaSync defroster controls.

Switch Boss is ideal for equipment cabs and other applications that require several defrosters to be activated with a single switch.

*One switch controls multiple defrosters. Ideal for environments with several windows to defrost simultaneously.*

## 2730 Switch Boss Defroster Network Control

When used with ThermaSync 2812 or 2824 defroster controls up to four Clear View II defrosters can be activated from a single switch. Connecting a second Switch Boss allows control of up to seven defrosters. Additional Switch Boss combinations are possible.

### Master Control

Any 2812 or 2824 ThermaSync defroster control can be configured a Master or Module by placing a jumper on the controls circuit board. Network configuration is normally done at the factory.

### Timing Cycle

ThermaSync controls can be set to automatically switch off at several intervals from 10 to 160 minutes\* or manual. The configuration of the Master Control determines the automatic shut off for all controls connected to the Switch Boss.

### Independent Power Modulation

Using power modulation, ThermaSync controls can regulate the amount of power a defroster receives. This feature is independent of the Master Control setting and allows different defroster sizes be used within a single Switch Boss array.

*\* Automatic off at 10, 20,40,80,160 minutes or manual. Requires 2812 or 2824 ThermaSync controls*
